

Memorandum

Date: Wednesday March 18, 2020

To: All McMaster Nuclear Operations and Facilities Customers

From: Director Nuclear Operations

Subject: McMaster University Nuclear Operations and Facilities Response to Covid-19

To our valued customers,

The current global pandemic caused by COVID-19 has created significant uncertainty. In response to current events, McMaster University is implementing measures to ensure the safety of all students and staff. The university is following guidance provided by the government and public health officials. Status updates for the university can be found at the [McMaster COVID19 website](#).

The Nuclear Operations and Facilities (NOF) group continues to operate at this time. NOF has been declared by the university as an essential service. The medical isotopes we produce and the services we provide will save lives. NOF will continue to operate as long as it is safe, and as long as products can be shipped to our customers.

We are committed to communicating any status changes as soon as they are available to keep you informed. If you have any questions, please do not hesitate to contact me directly.

Stay healthy and stay safe.

Kindest regards,

Chris

Chris Heysel, Director Nuclear Operations & Facilities
